DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

Regarding claims 1-4, prior arts do not disclose mapping the telephone number to a port address for a digital subscriber line access multiplexer (DSLAM) in communication with the digital subscriber line element, the digital subscriber line element located remotely from the DSLAM; sending an interrogation request to the port address of the DSLAM to interrogate the digital subscriber line element; collecting raw performance data of the digital subscriber line element in response to the interrogation request; and converting the raw performance data to analyzed performance data.

Regarding claims 5-17, the prior arts do not disclose mapping the telephone number to a port address associated with network equipment supporting the digital subscriber line element, the digital subscriber line element located remotely from the network equipment; sending a provisioning status request to the port address to interrogate the digital subscriber line element; collecting real-time provisioning data of the digital subscriber line element in response to the interrogation request; and converting the real-time provisioning data to analyzed provisioning status data.

Regarding claims 18-22, the prior arts do not disclose mapping the telephone number to a port address for network equipment associated with the broadband data transport element; sending an interrogation request to the port address to interrogate the network equipment to retrieve real-time performance data of the broadband data transport element; collecting raw performance data of the broadband data transport element in response to the interrogation

request; and converting the raw performance data to analyzed performance data using a set of analysis rules.

Regarding claims 23-30, the prior arts do not disclose a first server having an input to receive a telephone number from a web browser interface and having an output to provide performance analysis data associated with at least one of a plurality of network elements that form a distributed and geographically diverse data communication system; a second server responsive to the first server, the second server including logic to convert telephone numbers to port addresses for network elements of the communication system, the second server having an interface to communicate with an application server, the second server responsive to a communication circuit provisioning database and a network discovery and synchronization process.

Conclusion

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

(1) US 2007/0053292 (DePaul et al) discloses facilitating dslam-hosted traffic management functionality.

(2) US 2006/0285648 (Wahl et al) discloses telecommunication diagnostic information management.

Art Unit: 2616

(3) US Patent 7,046,675 (Lund) discloses method and apparatus to configure a digital subscriber line device.

(4) US Patent 7,027,405 (Khadavi) discloses system and method for broadband analysis of telephone local loop.

(5) US 2005/0190780 (Bailey et al) discloses dslam-hosted information storage functionality.

(6) US 2005/0144272 (Herzberg) discloses non-intrusive modem performance analysis.

(7) US 2004/0260795 (Gentle et al) discloses method and apparatus for determining telecommunication number based on presence.

(8) US 2004/0032879 (Keller-Tuberg et al) discloses integrated server module and method of resource management therefor.

(9) US 2003/0218984 (Tanaka) discloses communication system multiplexer included in the system line performance test method and recording medium having program recorded thereon.
